

1.0 INTRODUCTION

1.1 Executive Summary

The application relates to the church hall associated with St Ann's Catholic Church, Kingston Hill, Kingston upon Thames, KT2 7LX. The site occupies a landscaped plot along Kingston Hill and includes the existing church building together with associated parish accommodation and the church hall.

The proposal comprises a modest extension and refurbishment to the existing church hall facilities, providing upgraded community spaces together with an extended warm-up kitchen and upgraded toilet facilities. Minor internal layout adjustments are also proposed within the existing sacristy and adjoining circulation areas in order to improve accessibility, circulation, and operational functionality.

The proposal has been intentionally designed as a carefully contained addition which remains visually subordinate to the existing church buildings in both height and massing. The development seeks to preserve the character of the site and positively contribute to its wider conservation area setting.

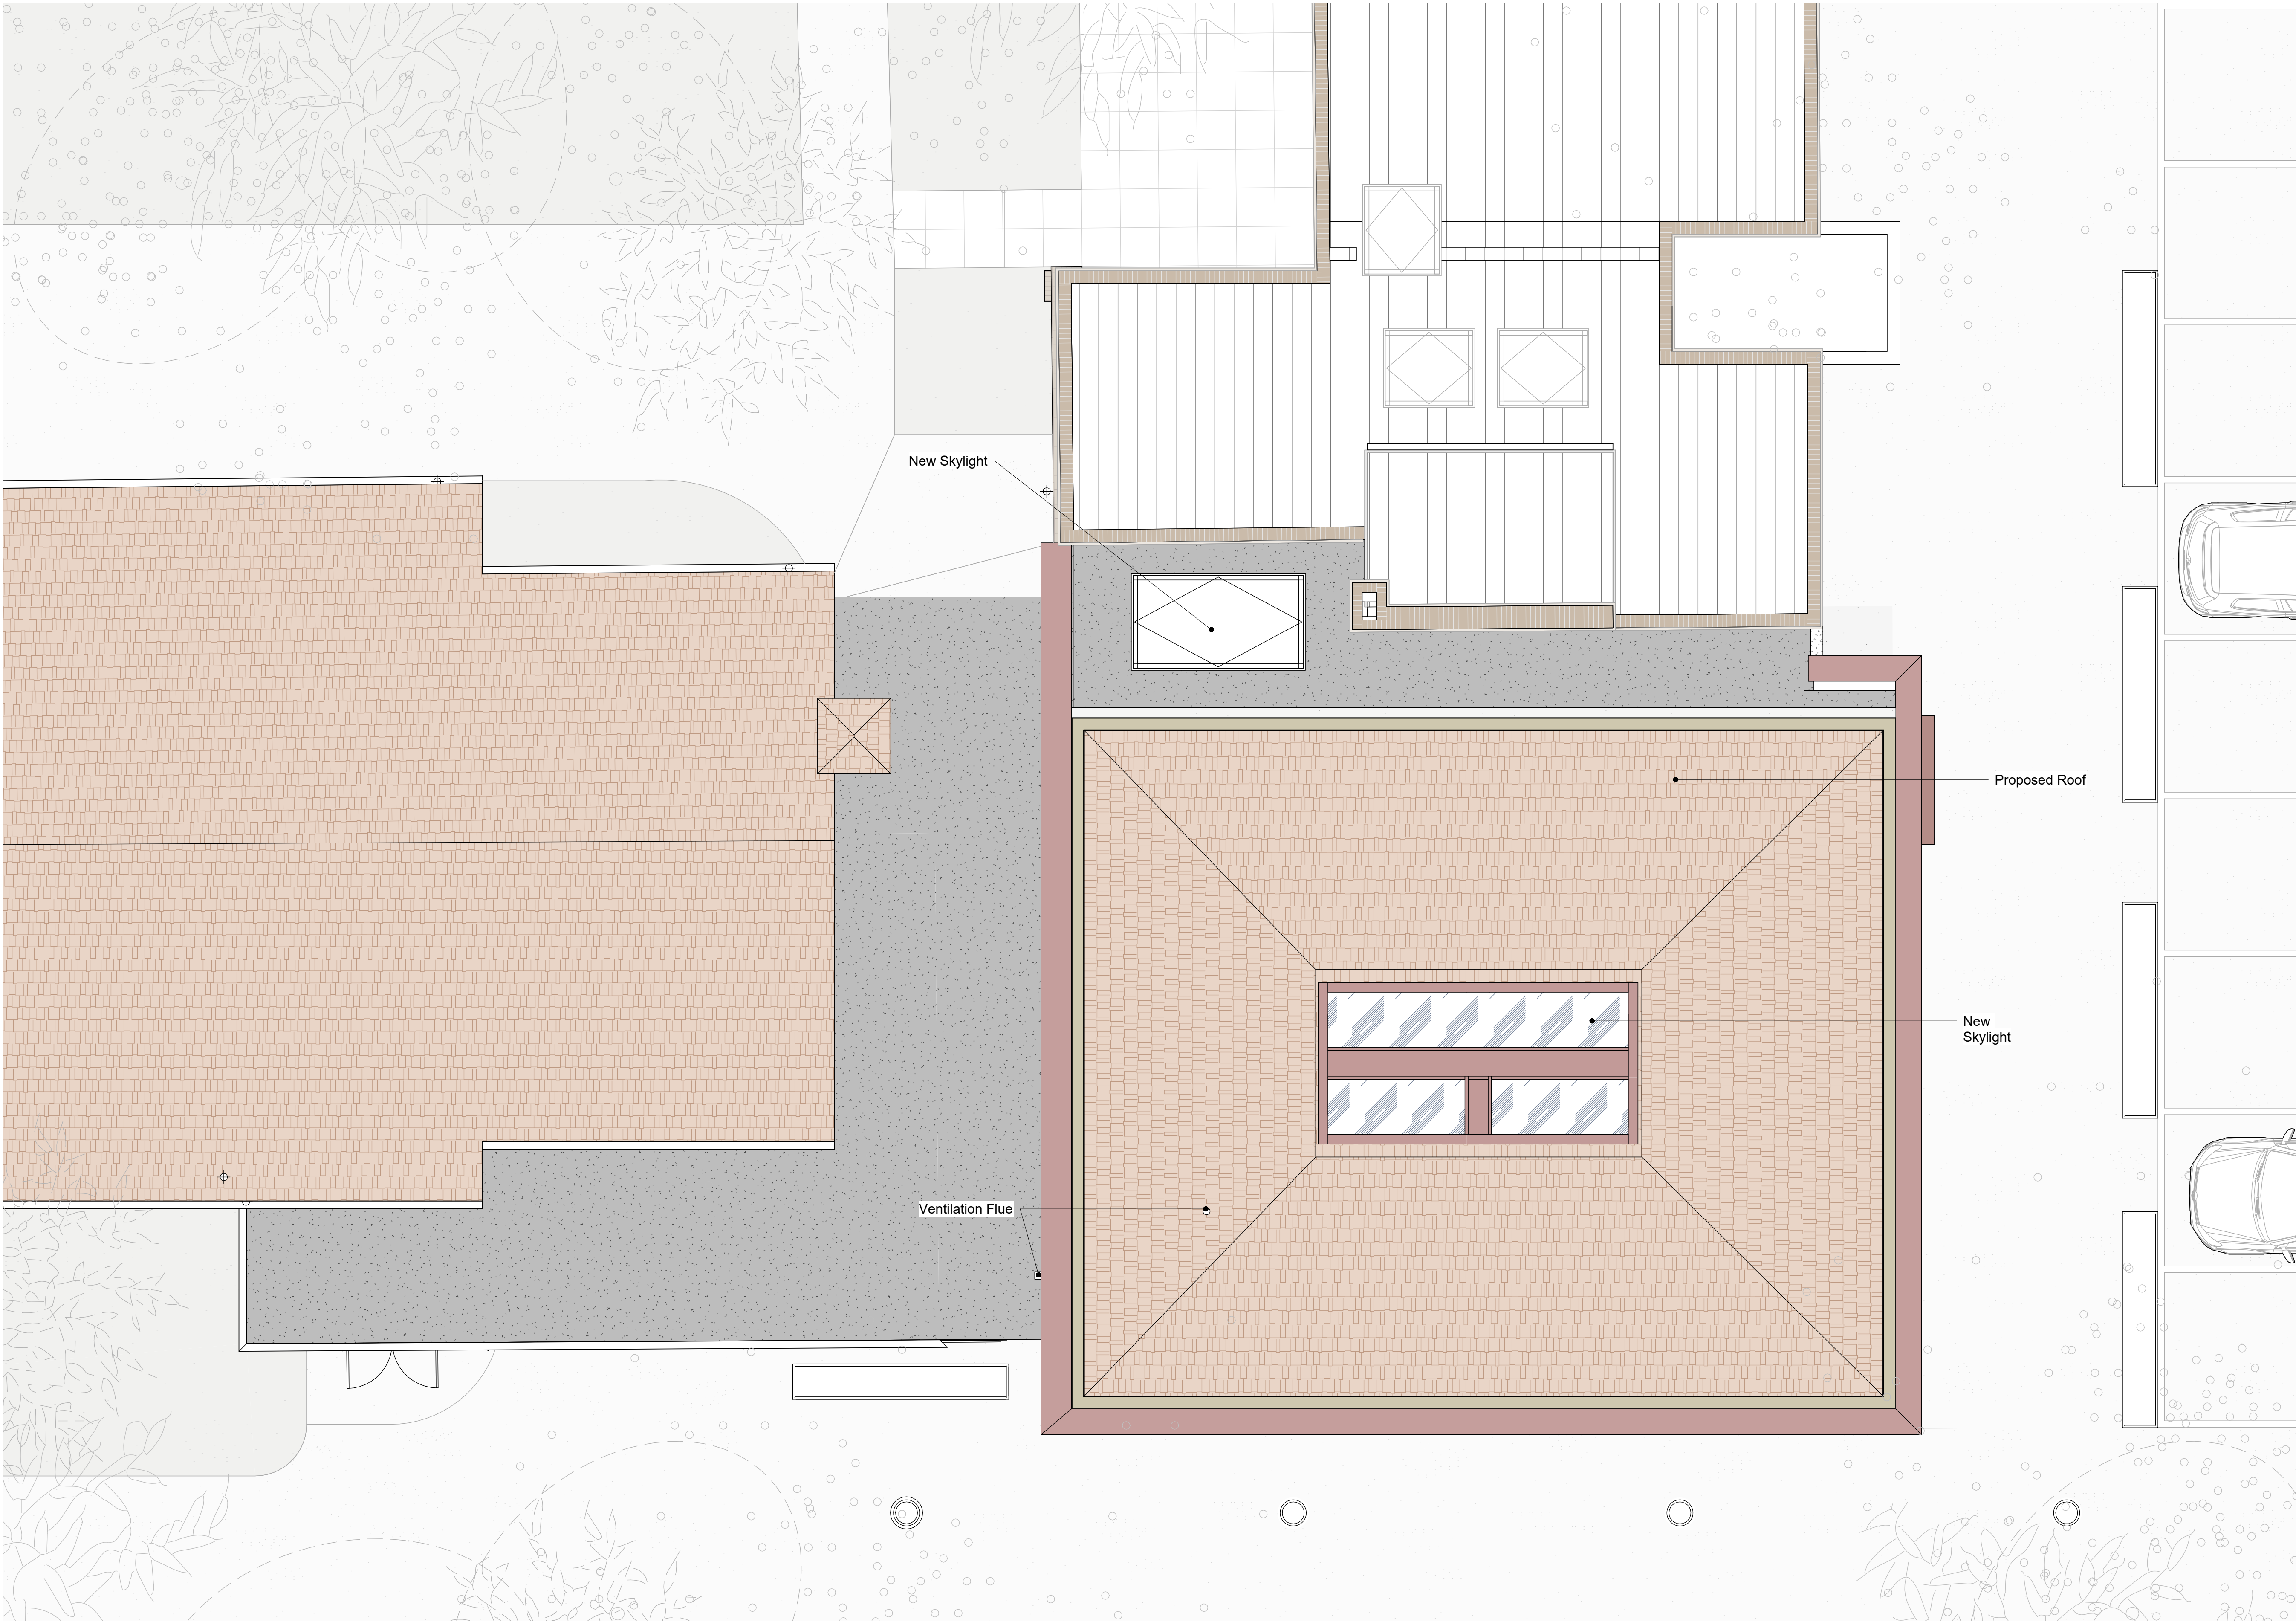

The proposed extension accommodates flexible multi-purpose spaces intended to support a range of parish and community activities, including meetings, conferences, gatherings, and refreshments after Mass. Thoughtful consideration has been given to the relationship with the existing church architecture through the use of complementary materials, proportions, and roof shape and volume, ensuring the proposal integrates sensitively within the wider site and surrounding townscape.
